NOTES TO FINANCIAL STATEMENTS JUNE 30, 2018

Interest Rate Risk

Interest rate risk is the risk that changes in market interest rates will adversely affect the fair value of an investment. Generally, the longer the maturity of an investment, the greater the sensitivity of its fair value is to changes in market interest rates. The District does not have a formal investment policy that limits investment maturities as a means of managing its exposure to fair value losses arising from increasing interest rates. The District manages its exposure to interest rate risk by investing in the County Pool. The District's Capital Outlay Projects Fund 41 and Revenue Bond Construction Fund 42 maintain investments of \$11,952,472 with the Fresno County Investment Pool, with an average maturity of 2.17 years.
